

Brian Sanderson's Pattern Recognition Algorithm

Is the maximum rotation order 1,2,3,4 or 6?

Is there a mirror (m)? Is there an indecomposable glide reflection (g)?

Is there a rotation axis on a mirror? Is there a rotation axis not on a mirror?

Note: Every pattern is identified according to three systems of notation, as in the example below:

442 The Conway-Thurston notation, as used in my tilings page.
 p4 The International Union of Crystallography notation.
 S442 The Montesi notation, as in his book
 "Classical Tesselations and Three Manifolds"
